Blogging Basics in 10 Minutes

Presented by Danielle Gomez at the 2014 Suzuki Conference

Easy Steps to Start a Blog:

1. Go online and type in "free blog host." Find a free blog host that seems to suit your needs.
2. The free blog host will ask you to select your blog's title and web address.
3. Once you complete your initial start-up steps, find the button that says "new post" or "posts" or "create new post."
4. Write your post content, click publish and done!

What to Do After the First Post:

1. Write more posts!
2. Spend time becoming comfortable with the layout of your blog's dashboard. You can do this easily by hovering your mouse cursor over buttons and seeing what the button is for.
3. Customize your look. Make your blog personal by changing the colors or layout. This *does not* require any programing. Free blog hosts are designed to be user-friendly. Changing the background color of your blog can be as easy as a few mouse clicks.
